DS-T2

DIGITAL TEMPERATURE SENSOR

The **DS–T2** digital temperature sensor allows temperature measurement in the range from −40°C to +110°C. It is suitable for recessed mounting, both inside and outside buildings. It is characterized by IP65 rating (liquid ingress protection).

Communication with the receiving device takes place via the 1–Wire interface.

DS–T2 is compatible with the **GPRS–A LTE**, **GPRS–A** and **ETHM–A** universal monitoring modules and other devices, and can be used to monitor temperature in living spaces, utility buildings, office buildings, production halls, boiler rooms or cold stores, as well as in vehicles and other mobile objects such as vessels.

- 1–Wire interface
- temperature measurement in the range from −40°C to +110°C
- for recessed mounting
- designed for outdoor operation
- IP65 ingress protection rating
- cable length: 3 m
- sensor diameter: 6 mm
