

CA-64 ADR-MOD

ADDRESSING MODULE

An addressing module for converting traditional detectors for an alarm system equipped with a relay output into detectors connected to an addressable control panel. A small enclosure of the addressing module makes it possible to install it event in detectors equipped with small-sized enclosures.

- converts standard (NO, NC) detector into addressable detector
- installs inside detector enclosure
- compatible with INT-ADR, CA-64 ADR addressable bus module

TECHNICAL DATA

Current consumption 1,2 mA
